

Marischal College is situated in a prime location in the historic city centre of Aberdeen. The City Council have leased and fully redeveloped and refurbished the Grade A listed building from the University for use as office space.

A new 4-storey car park was required to service the new office accommodation. It was important that this should not have a detrimental visual impact on the surrounding environment.

Lang+Fulton (formerly Orsogrill UK) supplied 716m² of **Louvre Talia-80** panels as wall cladding to screen the concrete structure, while preserving some transparency for light and ventilation.

The design was worked up jointly between Lang+Fulton and Holmes Architects.

The panels were supplied to a standard design with custom-sized closing panels. These were fixed to 100x50RHS posts centred at 1.7m which were attached to the main structural steel framework. There were 3 fire exit doors with self-closing devices.

The mild steel louvres were hot-dip galvanized and polyester powder coated RAL7040.
