

Great Western Studios, situated alongside the Grand Union Canal in Notting Hill, provide 107 workspaces for artists and creative businesses in a purpose-built new centre.

Lang+Fulton supplied custom-sized panels manufactured from *Italia-80*, one of the products from their steel louvred range. The panels formed an effective visual screen to the roof-mounted air conditioning plant and ancillary services, which met with the approval of the local Planning Authority.

The panels were mounted onto a support structure designed by Big-Foot Systems which ensured that there was no penetration of the surface roof membrane. The free area of the panels was an important factor in reducing the potential wind loading. They were supplied in a hot-dip galvanized and polyester powder coated finish in RAL7043 for low maintenance and durability.

Italia-80:

80% visual screening
