

A new £9.6 million Primary School in Tranent, East Lothian was praised by the Scottish Secretary for Education as "an excellent example of the work that can be done in easing demands on the environment".

The architectural brief for the design and construction had been set to the highest standards and to reflect sustainable principles.

Lang+Fulton were asked to supply the gates to an extensive bin store and recycling area adjacent to the school building. This amounted to 7 pairs of double-leaf hinged gates which were fabricated to exacting dimensions and supplied with adjustable hinges to fit within the brickwork surround.

The design was developed by Lang+Fulton using *Italia-80* steel louvred panels and 100x100x4 SHS posts, to provide a robust and durable solution combined with the required level of visual screening. The gates were hot-dip galvanized and polyester powder coated in RAL7024.
