Welcome to BritishFlora's Information Pack. Our species listing includes comprehensive information on each plant species such as flowering colour, height and flower period. We include our full range of products, pot and tray sizes. A technical note and explanation of our tray and pot sizes provides product information for our customers. It is our intention that this inclusion will make our client's task of quoting for projects and jobs much quicker and easier and our sales and technical team are there to help with any further queries you may have.

BritishFlora IS PEAT FREE

BritishFlora

Planting the Seeds for a Greener Tomorrow

BritishFlora has always been at the forefront of innovation and research for producing high quality British native plants from seed and vegetative material. We produce commercial quantities of native plants for a diverse range of applications such as remediation, reed beds, wildlife habitat creation and latterly native species green roofs.

BritishFlora offers a complete range of British Native flora with full British provenance that is grown exclusively on a purpose built nursery. We do not import plants in from Holland or elsewhere and we guarantee that all our plants are grown by us. We produce Native Wildflowers, Grasses and Sedges, Aquatic and Marginals including vast quantities of Phragmites communis. We also grow submergents or oxygenating plants, including Native Water lilies.

As always at **BritishFlora** we only grow British Native plants that are derived from fully known British provenance, either from our own seed bank or from trusted fellow Flora Locale subscribing sources. We also collect seed and vegetative material with full permissions from various organisations such as the Environment Agency and Local Authorities. We pride ourselves on our commitment to enhance our environment and preserve our indigenous flora for generations to come, be it by remediation, habitat creation or native species green roofs.

In 2012 **BritishFlora** completed its own in-house environmental policy by switching to PEAT FREE COMPOST for all our sowings and transplanting. We have researched and trialled the make up of our new compost alongside Alfa Aggregates and now have a formulation that gives consistent germination, controlled growth and is importantly, environmentally friendly. Our compost contains a starter charge fertilizer that ensures a controlled release of nutrients to ensure rapid establishment be they plugs or more mature plants.

We have a Technical Team that can assist you with planting details, species choice for specific areas and have a dedicated Ecologist and Technical Manager, who are available for site visits. We offer highly professional expert advice and have a wealth of knowledge covering all aspects of habitat management, planting advice and problem solving. Our expertise in native species green roofing is well known in the industry and we continue to see a rapid expansion of this arm of our business.

Our Sales Team are highly dedicated, with strong people skills and are there to make your life easier. **BritishFlora** strives to be the best we can be and we believe in the products we sell and why we sell them. We are driven by more than the need to make a profit and that makes us stand out from the crowd.

BritishFlora stands for quality, integrity and a commitment to the environment.

Planting the Seeds for a Greener Tomorrow

TRAY and POT SIZES AND EXPLANATION

We aim to make our customers lives easier by using multi-cell trays and root trainers to reduce the number of individual pots for ease of handling both on our nursery and by the end user. Much thought has gone into the choice of trays to propagate, grow on, transplant and finally ship to the customer. We have taken into account the volume of substrate (Peat Free from 2012), the area of optimum root growth and thus leaf area and the encouragement of strong root formation.

Multi-trays are easy to pick up and put down, they lend themselves to automation in filling and seeding and they reduce labour extensively when planting out.

BritishFlora Wildflower 65cc Plug 84 Cell Tray: Tray is **52 x 31cm**. The depth of each cell is **4cm** and there are 620 cells to 1m². Each cell holds 65cc of substrate. These trays are ideal for wildflowers and seedlings that may require further transplanting. We have found that plugs produced in these trays make rapid root formation and produce a healthy disease free plant that will establish well when planted out either for meadow enhancement or green roofs.

28cc *Leucanthemum vulgare* plug showing uniform, strong root mass.

BritishFlora 110cc Jumbo Plug 77 Cell Tray. Tray is **56.5 x 36cm**. The **depth** of each cell is **6.2cm** and there are 379 cells to 1 m². Each cell holds 110cc of substrate. These trays are ideal for the production of jumbo plugs and for stock items used for the coir log industry as the robust yet manageable plugs can easily be pushed into predrilled holes. Crops such as, *Phragmites*, *Carex*, *Juncus* and *Phalaris* lend themselves to this regime with rapid growth occurring in the spring and summer. Jumbo plugs of any species can be ordered and there is an increasing demand for this size plant

A 5cm 77 Jumbo plug of *Ajuga reptans* produced from cuttings ready to be shipped.

BritishFlora 7cm 45 Root Trainer tray: Tray is **53 x 30cm**. The **depth** of each cell is **15.7cm** and there are 252 cells per 1 m². Each cell holds 233cc of substrate. These trays are ideal for plants that require rapid and sustained root growth. The tapering cell encourages strong root development ensures that plants get away quickly and thrive. *Carex*, *Juncus*, *Phalaris*, *Lythrum* and other species also do extremely well in the 45 cell format and it directly replaces 7cm pots. It saves space, time and importantly labour. When planting in shallow water in the case of *Phragmites*, the tray will float in a flat bottomed crate increasing the hourly rate of planting substantially when compared to planting single 7cm pots.

A 7cm 45 Root Trainer plug of *Iris pseudocorus* grown from locally harvested seed and age approx 6 months.

BritishFlora IS PEAT FREE

BritishFlora

Planting the Seeds for a Greener Tomorrow

BritishFlora 7cm 40 Cell tray: Tray is **52.5 x 31.5cm**. The **depth** of each cell is **6.5cm** and there are 250 cells to 1 m². Each cell holds 190cc of substrate. These trays are used to grow mainly aquatic plants where root growth is often confined to the surface of the substrate or needs longer to establish fully. Plants such as *Butomus*, *Caltha*, *Myosotis* and *Apium* etc do exceptionally well in the 40 tray size which directly replaces a 7cm pot.

BritishFlora 9cm 28 Root Trainer tray: This tray is **53 x 30cm**. The **depth** of each cell is **15cm** and there are 176 cells to 1 m². Each cell holds 370cc of substrate. These trays are a direct replacement for 9cm individual pots where strong root development is required for example *Phragmites* or *Typha*. All 28 trays have 1 year old plus species.

BritishFlora 9cm Shuttle trays: These carrying trays with flush rimmed pots are designed to hold **18 individual pots** and are specifically used to hold larger size wildflowers such as *Stachys officinalis*, *Succisa pratensis* and *Leucanthemum vulgare* etc. Other species can be grown to order including native flowering bulbs.

A 7cm 45 Root Trainer tray of 1 year old *Phragmites communis* showing extensive root growth and fully developed new shoots. These are ideal for Spring and Autumn planting and quickly establish themselves. The tapering cell has encouraged roots to the bottom of the tray and these plants will get away very quickly once planted.

Our plant species are available in whole trays in the following formats. The minimum order for a single species in a plug tray is 144 x 28cc and for a root trainer is 77 x 5cm, 45 x 7cm or 28 x 9cm. For single species of multi-cell trays the minimum order is 40 x 7cm and for 9cm pots in shuttle trays is 18 x 9cm. For 1L, 2L, 5L and 10L pots minimum order quantities may apply.

Habitat Restoration Consultancy and Ecology

Site visits, ecology surveys and technical reports

Habitat Restoration Consultancy:

- Wildflower Meadows, Lakes, Reed beds & Greenroofs
- River Restoration, Wetlands & Woodlands
- Site Surveys, Technical Reports and Advice
- Soil sampling, testing and analysis (pH, N, P, K & Mg)
- Habitat Management Plans
- Creating Wildlife Habitats
- Vegetation Establishment & Erosion Control Methods
- Ground Preparation

Vegetation monitoring on greenroof

Ecological Consultancy:

- Extended Phase 1 Habitat Surveys
- National Vegetation Classification (NVC) Habitat Surveys
- Technical Reports for Planning Applications, EIAs, BREEAM, CSH and Development Licence Applications
- Specialist Protected Species Surveys and Mitigation:
 - Bat emergence and activity surveys
 - Breeding bird surveys
 - Dormouse surveys
 - Great crested newt surveys and Mitigation
 - Water vole surveys

Technical Consultants with extensive experience in ecology and habitat restoration consultancy. Ecologist Full Member of IEEM (Institute of Ecology and Environmental Management) and Associate Members of BALI (British Association of Landscape Industries). Covered by Professional Indemnity Insurance.

Woodland Burial Sites The Funeralcare Co-operative

Plan Bee Wildflower Meadow Creation

Vegetation topping

As part of the ambitious Plan Bee project, which aims to save the plight of honey bees and pollinators across the UK, The Funeralcare Co-operative Woodland Burial Sites have been awarded funding to create bee friendly wildflower corridors.

BritishFlora have managed the habitat creation of two wildflower meadows in Dorset of 6 acres and a 5 acre site in The Wirral. The BritishFlora technical team provided expert advice on soil testing, ground preparation and species selection to encourage maximum diversity for native bees and pollinators.

Local agricultural contractors conducted the ground preparation including spraying, primary cultivation and harrowing to prepare the ground for seed sowing. Specialist plant species mixes have been designed for dry acid grassland and wet acid grassland sites using a local seed supplier to Dorset to ensure local provenance seed.

Monitoring visits in 2012 have provided us with important information on the extent of wildflower establishment and the requirement for further management. We look forward to providing ongoing support to The Co-operative Woodland Burial Sites for restoring biodiversity and natural habitats to these special sites.

Greenwich Peninsula Regeneration Area

Biodiverse greenroof awarded 'excellent' BREEAM rating

Lend Lease commissioned BritishFlora to install a biodiverse greenroof on a prestigious building in the Greenwich Peninsula Regeneration Area.

BritishFlora supplied and installed over 40 species of British Native wildflowers, a diverse wildflower blanket and rockery areas to provide suitable habitat for conservation priority species. Bat boxes and black redstart boxes were installed on the roof and native sympathetic planting for these species will further encourage priority species to this habitat.

BritishFlora have been appointed to provide a maintenance contract and long-term botanical monitoring of the site, in addition to monitoring for priority conservation species. This monitoring will provide much needed ecological data on greenroof habitats and provide information on the effective methods of vegetation installation on greenroofs.

Planting wildflower plugs into greenroof substrate

Biodiverse vegetation after first growing season

BritishFlora

Planting the Seeds for a Greener Tomorrow

The habitat and ecological enhancement works on the greenroof gained maximum Landscape and Ecology Credits, and lead to an excellent BREEAM rating awarded to this development. This biodiverse greenroof will act as a flagship for the Greenwich Regeneration Area, where biodiverse roofs will play a significant role in the landscape and ecological enhancement commitments within this Regeneration area.

Greenwich 'biodiverse greenroof' in the first growing season showing significant vegetation establishment of wildflower plugs and germination from seed

Rockery on biodiverse greenroof to provide solution for extreme wind scouring of substrate, which was preventing vegetation establishment

BritishFlora

Planting the Seeds for a Greener Tomorrow

Hampton Court

BritishFlora design sustainable planting solution for Royal Palace Waterways

Hampton Court staff installing coir rolls

BritishFlora designed a sustainable solution for enhanced aquatic planting in the hard engineered waterways at Hampton Court. This is part of a wider pond and waterway restoration scheme across the Park to improve biodiversity, water quality, erosion prevention and aesthetics of these formal and natural water ways across Hampton Court.

As an initial trial a 20m section of marginal planting was installed along Klon Dyke using planted coir rolls, fagots and backfilling with site won silt taken from Klon Dyke. This backfilled area was planted with a diverse mix of marginal plants.

Assembling floating islands

Finished backfill planting behind coir rolls at Klon Dyke

BritishFlora

Planting the Seeds for a Greener Tomorrow

BritishFlora, assisted by Verdant Solutions and Hampton Court staff, installed 16 linear metres of biodiverse floating islands that lined either side of the formal Long Water Canal with the Palace providing a fine backdrop to this planting.

Biodiverse floating islands and coir rolls were planted up with bespoke British Native and local provenance biodiversity mix designed by BritishFlora and were pre-established in our wet beds on the nursery. Training of Hampton Court staff by BritishFlora technical team in marginal planting techniques will ensure the sustainability and feasibility of further marginal planting throughout Hampton Court with ongoing support from the BritishFlora team.

Floating Biodiverse Islands, Long Water Canal with Hampton Court Palace in the background

As a result of these works further marginal planting enhancements have been undertaken in the Paddocks area of Hampton Court. Through consultation with BritishFlora Hampton Court Grounds Team restored an area of eroded bank using coir logs and backfilled with silt from the ditch thus increasing depth and narrowing the waterway to increase flow rates and enhance macrophyte diversity. The backfilled area was planted with a Native biodiverse mix provided by BritishFlora.

Marginal planting works along the Paddocks ditches at Hampton Court

KEY:

Distribution within British Isles:

Brit Isles - Commonly found in British Isles ex. (except) ...

Abs - Absent

LA - Locally Abundant

LF - Locally Frequent

Occ - Occasional

R - Rare

VR - Very Rare

Intrd - Introduced

Nat - Naturalised

Growth Type:

A - Annual

Bi - Biennial

B - Bulb

P - Perennial

E - Evergreen

SE - Semi-evergreen

S - Shrub

T - Tree

PPF - Perfect for Pollinators

Plants on this list agreed by RHS as perfect for pollinators

BritishFlora Seed Mixtures

The following Seed Mixtures are bespoke blends of 100% perennial wildflowers (unless otherwise stated) of British Provenance seed specific to a variety of soil and environmental conditions. These mixes represent natural plant communities and have been developed over many years based on our experience in the field of habitat creation, ecology and horticulture. We are always looking to develop our seed mixtures and increase the diversity of species available to enhance the restoration our flower rich habitats and our mixes reflect this dedication.

BFS Seed Mixtures can be also be ordered as Grass & Wildflower Mixtures and our technical team can advise you on the proportion of grasses to wildflowers required that is suitable for your specific project and site conditions. Our grass mixtures are developed in conjunction with the wildflower mixes and contain non-aggressive grasses specific to the indicated soil and environmental conditions. The standard blend includes 80% Grasses and 20% Wildflowers.

BFS1 DRY/SANDY SOIL MIX

4% Agrimony - <i>Agrimonia eupatoria</i>	3% Perforate St John's-wort - <i>Hypericum perforatum</i>
6% Bird's-foot Trefoil - <i>Lotus corniculatus</i>	6% Lady's Bedstraw - <i>Galium verum</i>
8% Black Knapweed - <i>Centaurea nigra</i>	6% Musk Mallow - <i>Malva moschata</i>
4% Bladder Campion - <i>Silene vulgaris</i>	6% Oxeye Daisy - <i>Leucanthemum vulgare</i>
3% Bulbous Buttercup - <i>Ranunculus bulbous</i>	2% Rough Hawkbit - <i>Leontodon hispidus</i>
1% Cowslip - <i>Primula veris</i>	12% Self Heal - <i>Prunella vulgaris</i>

TERMS OF BUSINESS

Quotations

Quotations are valid for 30 days and exclusive of VAT. Carriage fees are based on the order being despatched in its entirety, in one shipment, unless otherwise specified at the enquiry stage. Extra charges may be applicable if the terms of delivery are changed after confirmation of an order.

Orders

Our plant species are available in whole trays in the following formats. The minimum order for a single species in a plug tray is 144 x 28cc and for a root trainer is 77 x 5cm, 45 x 7cm or 28 x 9cm. For single species of multi-cell trays the minimum order is 40 x 7cm and for 9cm pots in shuttle trays is 18 x 9cm. For 1L, 2L, 5L and 10L pots minimum order quantities may apply.

Orders are accepted subject to plants being available from our own stock at the time of delivery or grown to order with appropriate lead time. All despatch dates are target dates and we reserve the right to vary delivery dates according to weather conditions and other factors beyond our control.

Deposit Terms

Unless otherwise agreed and confirmed in writing, the following Deposit terms apply to all orders. No order will be considered as being confirmed until the requisite deposit has been received.

A 30% deposit is required for orders valued £2,500 – £9,999.

A 35% deposit is required for orders valued £10,000 - £19,999.

A 40% deposit is required for orders valued £20,000 – £29,999.

A 50% deposit is required on orders valued over £30,000.

Payment Terms

Customers without a credit account are to pay the order total in full prior to despatch of the order, a 'paid' invoice will be sent as receipt of payment. We accept payment by cheque, credit card, and internet transfer.

All credit accounts are due for payment net 30 days from date of invoice. The Company reserves the right to charge interest at the rate of 2% per month on any overdue account. If credit terms have not been approved by the time of uplift/delivery, payment terms will be the same as those for customers who do not have a credit account.

Cancellations and Delays

Notification of order cancellation must be in writing. All deposits are non-refundable in the event of the cancellation of an order. Should an order be cancelled less than 6 weeks before its confirmed uplift/delivery date, 40% of the order value will be invoiced to the customer. Should an order be cancelled less than 4 weeks before its confirmed uplift/delivery date, 60% of the order value will be invoiced to the customer. In the event that an order is cancelled less than 2 weeks before its confirmed uplift/delivery date, 80% of the order value will be invoiced to the customer. These amounts will be calculated to take account of the deposit already paid by the customer. In cases where the customer is unable to uplift/take delivery by the confirmed date but wishes to do so at a later date, the Company reserves the right to make an additional charge to cover the eventuality, which charge will take account of the changed circumstances and agreed and confirmed in writing between the two parties.

For further terms of business please read our Standard Conditions of Sale

BritishFlora grows and produces commercial quantities of British native flora only.

BritishFlora are a listed supplier on the FLORA LOCALE and adhere to the code of conduct for native British provenance suppliers. BritishFlora are a registered as Black Popular suppliers and propagators with the Forestry Commission under the Forest Reproductive Material Regulations Act, 2002.
