

Zeta Tree Grille

Product Overview

The Zeta is a new, unique tree grille boasting a completely invisible structure allowing interruption-free paving right up to the tree. The low-profile design provides high strength support for virtually any type of paving adopted for the surrounding street scene. This is even suitable for areas supporting certain types of vehicle access. The adjustable collar simplifies installation by absorbing variances in the tree pit build up in any direction, and allowing perfect finish levels and orientation. The Zeta comes supplied with the full tree pit irrigation/aeration system as standard. This has been used with excellent results in the most demanding, very low tolerance locations.

Features

- Unique high strength, low-profile design
- Adjustable collar
- Integral irrigation/aeration system

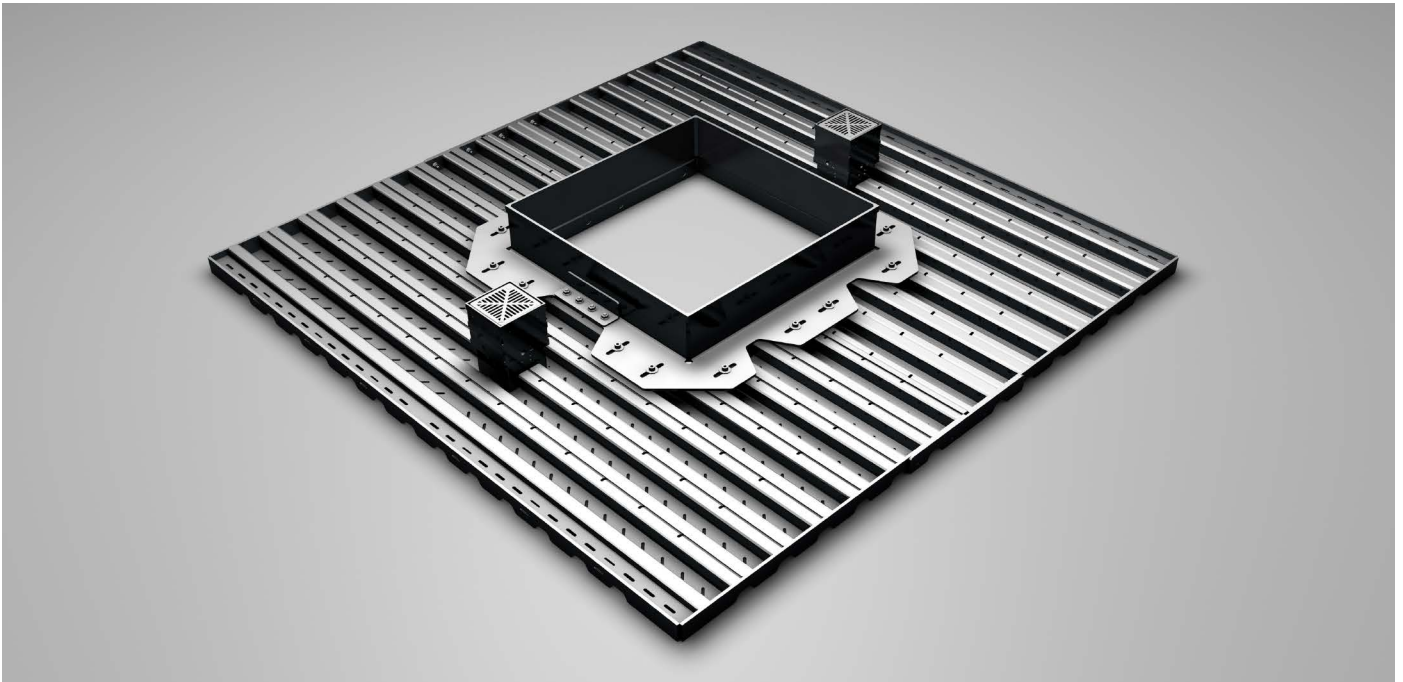

Benefits

- High strength profile allows certain vehicular overrun
- Perfectly aligned paving in prestigious low tolerance projects
- Easier and faster paving with reduced cuts and zero interruptions

Technical Specification

Material	Finish	Colour
Galvanised Steel	Galvanised BS EN ISO 1461	Galvanised Steel
Code	Description & Dimensions	
GBUZETA10A	Zeta 1.0mtr square with 600mm square opening	
GBUZETA12A	Zeta 1.2mtr square with 600mm square opening	
GBUZETA15A	Zeta 1.5mtr square with 600mm square opening	
GBUZETA18A	Zeta 1.8mtr square with 600mm square opening	
GBUZETA20A	Zeta 2.0mtr square with 600mm square opening	

Test Results & Performance

Load bearing capacity varies according to size of grille, paving type and build up depth. FEA testing can be carried out for specific projects. Virtually any load bearing requirement can be achieved with engineering; light vehicular overrun is standard depending on paving type and build up depth.

Maintenance

- Visual periodic inspection of irrigation/aeration inlets
- Remove, clean and replace filter brush periodically
