

RootRain ArborDrench

Slow release irrigation of newly planted trees

Overview

GreenBlue Urban's RootRain ArborDrench is designed to slowly release water to the immediate root ball zone of newly planted trees from 1" to 8" in girth, enabling their healthy establishment. The RootRain ArborDrench will allow the water to penetrate the ground immediately above the tree rootball.

The RootRain ArborDrench is ideal in situations where maintenance issues are likely to cause premature failure of newly planted urban trees - ensuring that they have access to water during hot weather.

Features

- 55 Litre water capacity
- Zip allows multiple bags to be fitted together

Benefits

- Visible management - Instantly see when water has run out
- 100% water absorption with no run-off
- Can be used with chemical additives
- Combined multiple bags for larger trees
- Can be filled in minutes
- Installation does not require tools

Technical Specification

Code	Type
GBUAD50L	55 litre RootRain ArborDrench

Installation

- Simply wrap the ArborDrench around the tree and zip securely
- For a double ArborDrench application zip two together, wrap them around the tree and zip the second zip securely

Storage

- No special requirements

Maintenance

- Inspect for damage and replace if required
