

RootRain HydroFort

Water reservation and tree protection

Overview

The **RootRain HydroFort** tree protector protects trees from road salt and strimmer damage, but most importantly, prevents water wastage during irrigation. Winter salt spreading is one of the biggest dangers to street trees, the **HydroFort** prevents ingress of salt spread near the tree. Developed and used very successfully in many countries including hot, water-poor countries.

Features

- Tough recycled U.V. stabilised plastic
- Comes in 2 click-together halves
- Circular format with serrated bottom edge

Benefits

- Robust material stands up to rough treatment
- Prevents salt ingress
- The format enables easy installation process
- Attractive low-profile appearance
- Contains up to 26ltrs of water
- Proven to improve vegetation success

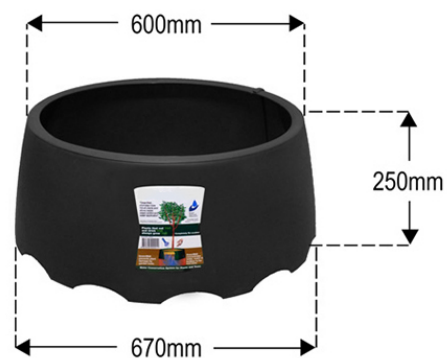

Technical Specification

Code	Diameter	Height	Colour
RRHF430B	430mm	190mm	Black
RRHF600B	600mm	250mm	Black

Regular Size

Large Size

Storage

- Not applicable

Maintenance

- Not required

Installation

1. Join the 3 sections leaving the final joint open.
2. Prepare the planting hole to a diameter of 670mm and required planting depth.
3. After placing the plant wrap the RootRain HydroFort around plant and secure final zip.
4. RootRain HydroFort should be installed to half the depth.
5. Back fill, mulch and fill RootRain HydroFort with water.
