

Arborguy

DeadmanTree Anchoring System

Product Overview

This method of securing trees has many advantages over staking and is suitable for large root-balled trees.

The Arborguy 'deadman' system is ideal where there is a risk of damage to underground utilities in the immediate vicinity of the tree pit.

Features

- Effective and out of sight
- Strapping will not cut into the rootball
- Cost saving as no need for mats or timber to protect the rootball

Benefits

- Fully complements GreenBlue Urban packages
- Designed for trees in urban and rural environments
