

## RICHARD COBDEN NURSERY SCHOOL

A nursery play space was designed and built to incorporate two climbing structures with a variety of ways in and out, with a connecting bridges and dens under. We also incorporated planting, decorative elements, music features, water play and a covered sandpit zone. There was also a story-telling circle seat.

The spatial complexity of this scheme successfully provided lots of different sorts and characters of spaces allowing the children to invent and impose their own play imagination rather than those that are adult imposed.
