# VBA99 Antimicrobial Metal

Kills Covid-19 in minutes!

Independent lab testing by the University of Southampton has proven VBA99 to kill 95% of covid-19 within 10 minutes of contamination. In addition, superbugs such as MRSA, E-Coli and Norovirus are also effectively and rapidly killed by contact with VBA99.

Lifetime Protection - No Coating

Unlike plated or coated finishes VBA99 is a copper-based metal material. There's no surface coating to wear-off, so even vigorous cleaning doesn't compromise effectiveness.

Tarnish Free Copper Blend

VBA99 maintains its pristine finish and does not oxidise or discolour like copper or brass does. The lightly brushed finish coordinates well with stainless steel on non-touch surfaces.
