screws, coach bolts,  
and nails**

OSC's FastenMaster Structural Wood Fasteners

# Spots for LOKs.

**FastenMaster**  
**LOK Line™**

LOKed in Seconds. LOKed for Life.

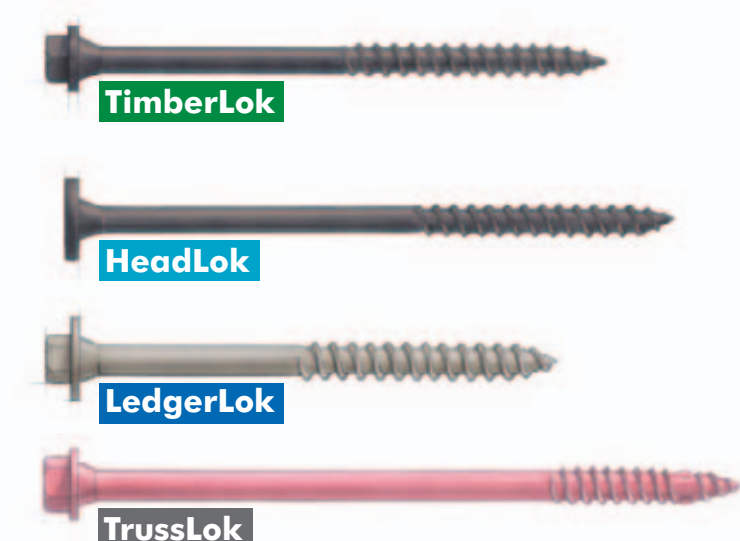

FastenMaster's **LOK Line** is a family of contractor quality, structural fasteners that are being used in a variety of wood-to-wood applications with no predrilling. Contractors across the country are reducing installation time by replacing their screws, bolts, and nails with these code compliant fasteners. And, they are finding new spots for LOKs everyday.

The next time you're on the job site, see if you can find a new spot to replace your old screws, bolts or nails with one of FastenMaster's **LOK Line** products.

Always follow correct application and installation practice when using FastenMaster Products. Photographs and pictures showing product usage should not be used as a reference for fastening patterns. A structural engineer is responsible for designing all connections which include the number and location of fasteners and minimum end/edge specifications to meet national and local code requirements.
