

EverEdge is offering bespoke garden edging, garden rings and planters to suit any design requirement or specification in the form of EverEdge Custom.

The service provides expert advice on the best way to make bespoke pieces to any design, length, height, thickness or finish.

EverEdge steel options include:

- Mild steel – Weathers naturally and is allowed to rust.
- Galvanised steel – Mild steel, treated with a layer of zinc to protect and prevent rusting from occurring.
- Cor-Ten Steel – Similar in appearance to mild steel, but produces a rusty patina which protects the underlying steel from weathering.

A powder coating is also available applied to the galvanised steel. The standard range of colours includes brown, black, slate and green. However, as part of the bespoke EverEdge custom service any colour can be specified.

Typical Usage

- Park roads & pathways
- Driveways and tracks
- Golf Clubs
- Memorial Gardens
- Play areas
- Hospitals
- Housing & Commercial developments
