

The SMIMO120 is suitable for processing and upgrading organic by-products. Capacity up to 35m³/hr and high separation efficiency make this design of machine unique.

The special design allows for processing both mono as well as mixed flows. These flows may contain packed and unpacked food stuffs.

Advantages -

- Suitable for packed and unpacked food waste
- Grinding and unpacking in one machine possible
- Less power consumption per m³ of product
- Able to handle larger products
- Dryer & cleaner packaging materials on discharge
- Larger remains of packaging material
- Organic output with minimal contamination
- High dry solids content of the organic end product
- No liquid necessary
