

DIRECTORY SYSTEMS

If you need to display multiple pieces of information that may change from time to time – such as a retail guide or a business directory to accompany a location map – our directory systems can fulfil your requirements.

Directory systems can be either wall-mounted or freestanding and are manufactured to your brief. You can choose a design, material and format that will perfectly suit your environment and corporate style. Our project planning team will provide a detailed drawing of all sign displays for approval prior to manufacture.

To ensure compliance with any corporate guidelines, directory systems can be finished in most RAL colours (see p.58), with self-adhesive cut vinyl or full colour graphics.

Units are supplied with all necessary fixings.

At a glance...

- Easy to update
- Ideal for retail and commercial applications
- Choose size, design and material to fit your corporate style

PUBLIC WARNING NOTICES

Whether you are warning the public about a potential danger, or politely requesting that they keep off the grass, it is vital that your notices are clear and highly visible.

We can provide aluminium warning notices in a variety of shapes - including circles, triangles and rectangles in standard road traffic sign sizes - as well as meeting bespoke requirements. A powder-coat finish to the front and back with screen-printed, prime etched or self-adhesive vinyl graphics (see p.48-53) produces a hard-wearing and clear sign. Visibility can be further enhanced with reflective surfaces where traffic control is a consideration.

Created from high-quality aluminium these signs are rigid and hard-wearing as well as lightweight, making them an extremely practical and cost-effective signage solution.

All warning notices can be supplied with wall-mount or rail fixings, or posts with stainless steel clips.
