

**Designers and manufacturers of
office slides**

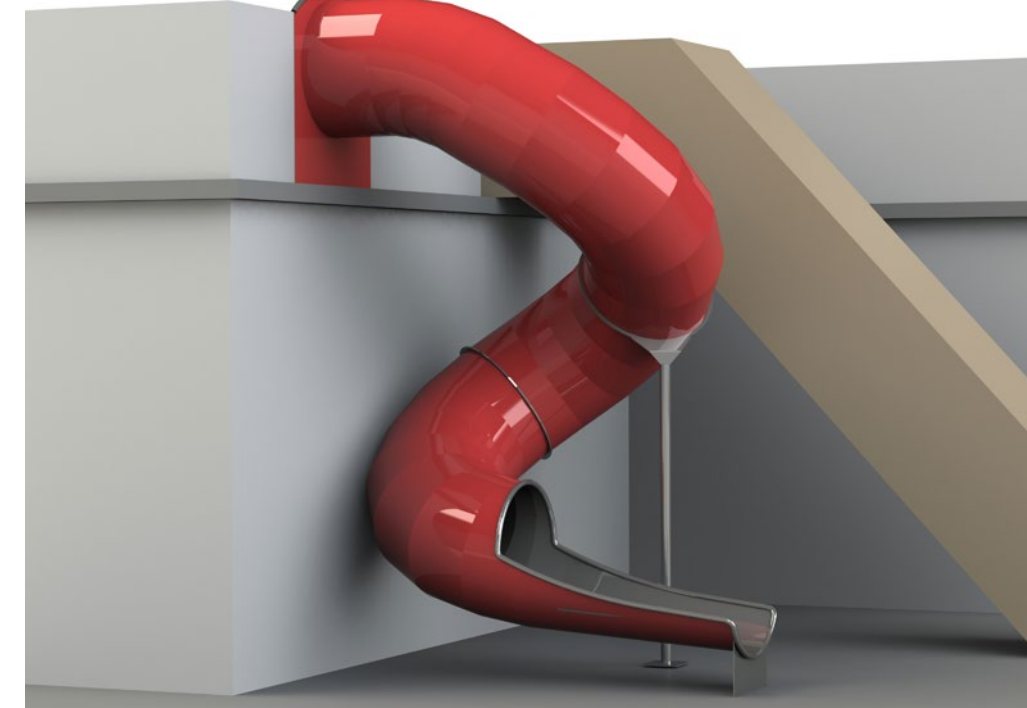

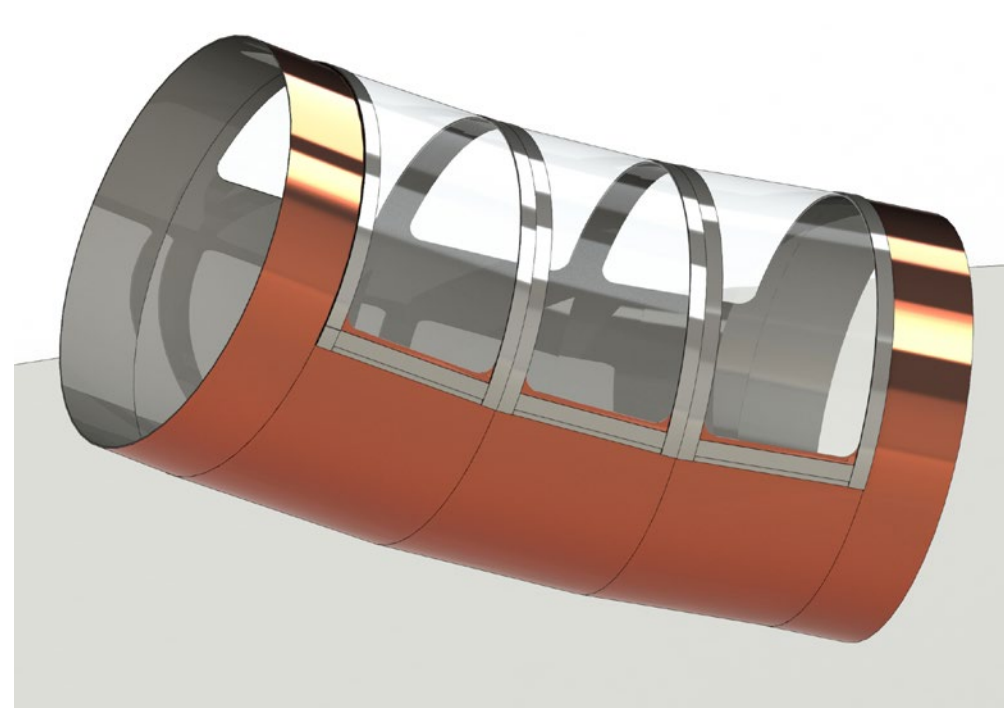

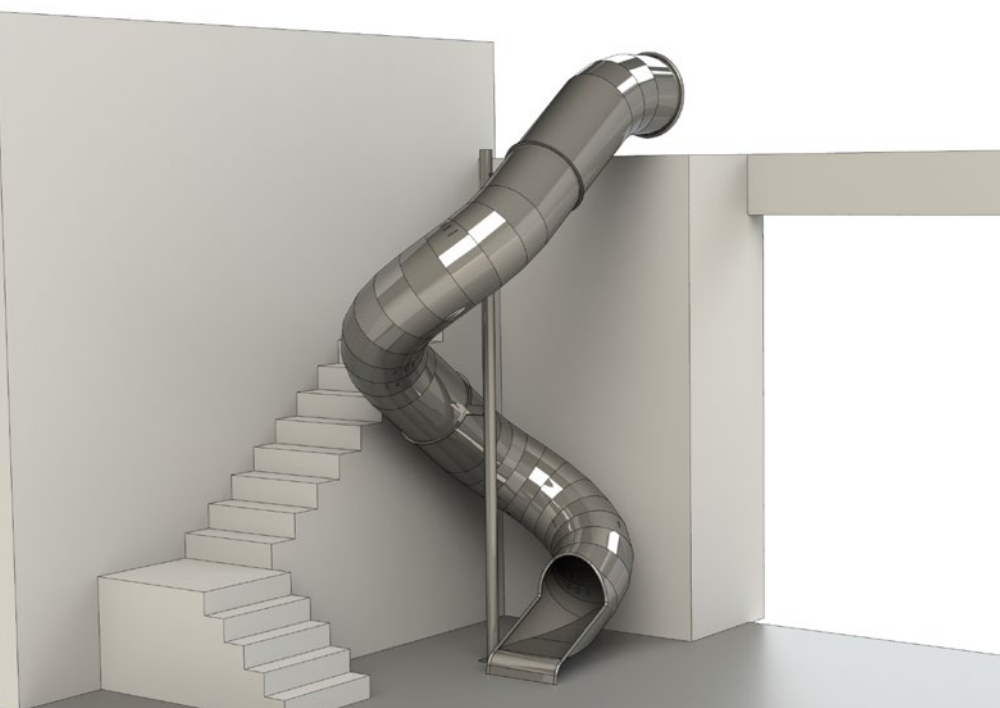

Our Process

Massey and Harris are a design led company.

We're passionate about design, and believe that it should be at the forefront of everything.

We take a pride in what we produce, by sourcing only the best materials, utilising innovative manufacturing process and pushing the boundaries in play equipment.

On the following pages, you'll find a selection of our slide installations that we're proud of and push the envelope on design.

Design

To create an initial design and quotation, we request the supply of some basic dimensions, most importantly vertical height. This information is given to our in-house design team to create the CAD model.

Once the initial slide design concept is agreed, it may be necessary to conduct a site visit to confirm dimensions

With full design and manufacturing facilities, we can offer a range of complimentary products for continuity within your scheme.

Manufacture

Following the design process using the latest CAD and quality engineering processes we manufacture all our products within our Manchester based facility to the EN 1176 standards.

Our production team are clearly focused on providing safe and durable pieces of equipment. We use laser profiling to ensure accuracy and our team of highly skilled welders and fabricators take care and pride in the assembly of our slides.

Our standard finish is a brushed stainless steel, we can also offer a powder coated exterior finish to most RAL colours. Some other finishes that we can apply are vinyl wraps, and we can also add windows and lookout holes along the slide.

Delivered and Installed

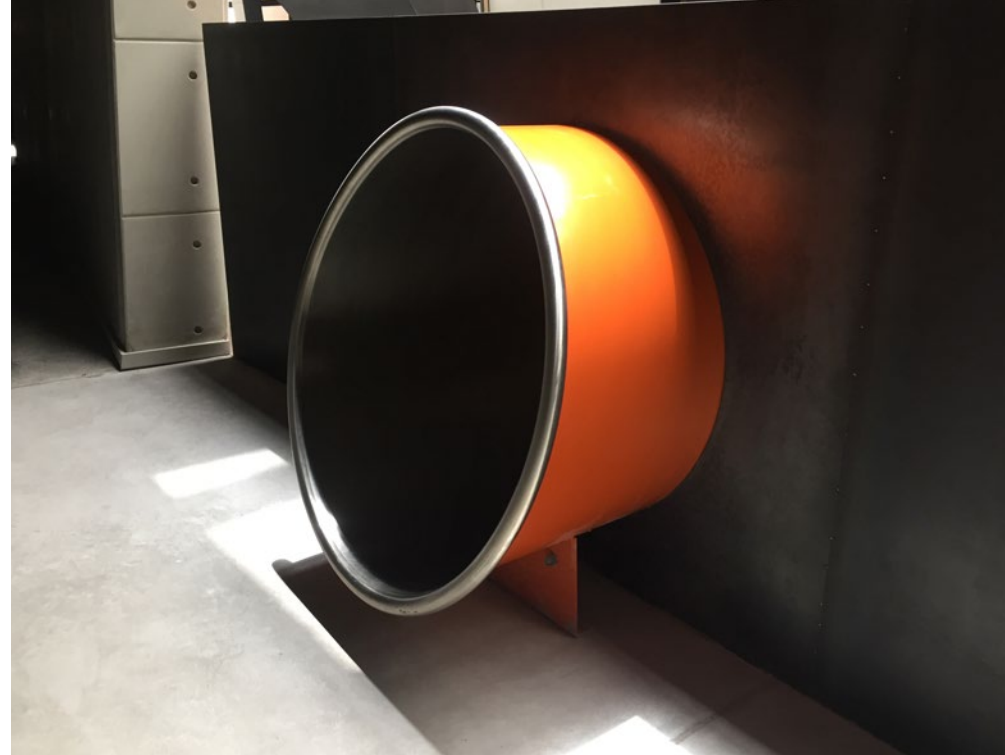

We offer supply only, supply and install and full design and build options. We are experienced working as main contractor and as part of a team delivering projects to completion.

By developing close relationships with our customers and partners, we work together to keep the client informed and play our part in solving any installation and logistical problems.

Our finished products are well designed, high quality slides that fulfill the client brief exactly as requested.

The slides are low maintenance pieces of equipment, but we provide fast and responsive customer service to help answer any questions that might arise.

We provide operational and maintenance advice at the time of installation and are available on the phone or via email to answer specific site questions.

Arki Group - Dubai

Height: 3.9m with 1 bend.
Stylised Entrance Section.
Powdercoated Orange
Additional text transferred onto slide.

Our client, the Arki Group, were after a slide to take them from first floor level to the break out area. We manufactured a slide that curved around 90 degrees, but maintained a fluidity as it transcended down. The overall look is very fluid and utilises curves on the starting section to give the slide a more contemporary look.

Liftshare - Norfolk

Our client, Liftshare, were after a slide that ran from their office space into the reception area. We also tailored the slide so that it had a customised exit section.

The slide was installed alongside their meeting room giving them an additional unique style. The entrance to the slide was built up with a retaining wall and then wallpapered to give it a truly unique feel.

YouGov Slide

Installed at YouGov headquarters.

The slide has a double kink, which even though it's minimal in its deviation, gives a great change of direction to the user. The slide was powdercoated in a striking red to fit in with the clients' colour scheme.
