Proludic introduces a Robinia range of equipment created by our design team and manufactured in our own production facilities.

The Origin^o range comprises of a series of trails and multi-play structures.

Modular in design and offering progressive levels of difficulty, Origin creates play areas that are in perfect harmony with their natural surroundings.

The irregularity and curvature of the uprights combine to make each piece of play equipment a unique structure.

“Origin changes the feel of an urban play area. It allows children to make a connection with the one of nature’s most beautiful material - Robinia. It matures and changes through the years bringing robustness and longevity for many years of innovative play.”

Anne Parkin - Key Accounts Manager
