

EverEdge is manufactured and coloured to resemble neatly cut soil edging. It is an all-in-one system requiring no stakes to support it. It can be bent easily to follow the contours of beds, drives and paths.

Gardeners love it. It is totally weather-resistant and maintenance-free.

Most importantly, it is designed to be mown over, providing the perfect edge time after time, in most installations eliminating hours of back-breaking effort.

Versatile EverEdge can be bent to follow virtually any shape of bed or path

EverEdge is an all-in-one system. It does not require stakes to support it, and once installed it presents only a clean, smooth face, with no unsightly profiles to spoil its unobtrusive appearance.

The pictures in this leaflet show EverEdge in mostly large scale applications.

It is also a wonderful time saver in smaller gardens, where only a few metres might be required.

FLEXIBLE STEEL EVEREDGE CAN BE BENT TO VIRTUALLY ANY SHAPE

The 3 depths shown below are actual size to help you determine your own requirement

Each size has a spike length of 94mm (3.7in)

EverEdge Depth and Thickness (ACTUAL SIZE)

| | | | |
|------------|-------|----------------|------------------|
| EverEdge A | 125mm | Standard 1.6mm | HeavyDuty 2.5 mm |
| EverEdge B | 100mm | | |
| EverEdge C | 75mm | | |

PO Box 9, Stroud, Gloucestershire GL6 8HA

FLEXIBLE STEEL GARDEN EDGING WHICH BENDS TO VIRTUALLY ANY SHAPE

A brilliant and simple concept

THE PERMANENT WAY TO MAINTAIN NEAT EDGES FOR LAWNS, DRIVES, PATHS, FLOWER AND VEGETABLE BEDS

SAVES HUNDREDS OF HOURS - EVERY YEAR

EverEdge is the permanent solution to the age-old problem of maintaining neat edges for lawns, drives, paths, flower and vegetable beds. It can be used in a variety of soil conditions.

EverEdge is manufactured from 1.6mm and 2.5mm thickness galvanised mild steel, coated with corrosion-resistant paints. **Once it's installed, it's maintenance-free.**

EverEdge prevents the unsightly creeping of grass on to paths and flower beds

STYLISH AND VERSATILE. EASY TO INSTALL. NO MAINTENANCE

Measure your requirement and add 6% to allow for the overlap required when joining the sections together.

INSTALLATION

- 1 It is important to form either a new edge or to re-cut your existing edge. This can be straight or curved.
- 2 Place EverEdge where required. Take a block of wood, place on top of the EverEdge and hammer in to the ground to approximately 15 mm below your cut grass level. Curve or bend EverEdge as required.
- 3 Link EverEdge by locking on to the previous piece. There is also a tongue below the locking piece which should be pushed through the hole with a screwdriver.

You have completed your EverEdge installation
It's that simple

OUTSTANDING EVEREDGE PRODUCTS FOR LARGER PROJECTS

ProEdge is an efficient new option in flexible steel edging for larger projects

- 2.5 metre length for quicker installation
- Fewer joints for unobtrusive, cleaner edges
- Bends easily to follow virtually any shape
- Heavy duty 2.5mm thick galvanised mild steel will not rust
- Deeper and wider spikes for extra stability (shown right with EverEdge Classic 1 metre)
- Standard brown paint finish - other colours available to order
- Links with the EverEdge Classic 1 metre range (shown right)

NEW 2.5M LENGTH

EVEREDGE CLASSIC GARDEN EDGING SYSTEM - STANDARD BROWN FINISH

1 metre sections of EverEdge (5 x 1 metre pcs) are available in the 3 depths shown below, in 1.6mm regular thickness and **2.5mm HeavyDuty**

EverEdge 75mm, 100mm and 125mm depths have been designed to lock together and maintain a level top edge

EVEREDGE GALVANISED AND COLOURED OPTIONS

EverEdge is supplied as standard in the finishes shown here

Other colours can be made to order

EVEREDGE PROEDGE AND BESPOKE GARDEN EDGING SYSTEMS

Where a deeper edge is required, for example in the construction of new pathways and raised beds, we recommend the EverEdge Bespoke System

EverEdge Bespoke is available in 2.5 metre lengths, 2.5mm and 4mm thicknesses, and can be made to order in various depths between 150mm and 300mm
