➤ Know your flow

Easy, accurate and reliable

The Georg Fischer name stands for reliability and durability. Our products guarantee quality, innovation and functionality. The new variable area flow meter continues in this tradition. With the flow meters type 335 and 350, as well as the type series SK- short version and the special versions in PVDF, GF Piping Systems offers radially dismountable measurement devices for flow measurement in industrial piping systems. These instruments supply accurate measurement values without an energy source.

A variety of installation lengths

The variable area flow meters are now available in the installation length 335 mm, 350 mm, 200 mm, 185 mm and 165 mm. The taper tubes are available in polyamide,

polysulphone and transparent PVC-U. The standard floats are in PVDF with or without magnet. The end stops are in PVDF. The threaded joint including insert is available in PVC-U, as well as in PP or ABS on request. The O-rings are made of EPDM or FPM. The nominal pressure is 10 bar at 20°C.

Broad fields of applications

All the flow meters are equipped with a double scale: a percentage scale as well as a scale for the flow volume. The standard scale is printed in l/h. Special scales are on offer for m³/h, GPM, in addition to special graduations for HCl, NaOH and air and can be affixed on taper tubes without scales subsequently. Measuring accuracy falls in the accuracy class 4 according to VDE/VDI 3513 Sheet 2.

The variable area flow meters from GF Piping Systems appear with a new design. With the type 350 the range of products has been enlarged by a new installation length. The different installation lengths in a variety of materials and special designs offer optimal solutions for use in diverse media.

➤ Reliably handles large flow volumes
