## Bonnybond Selects SuperSleve

**Groundwork contractor, Bonnybond has been specifying and installing Hepworth's SuperSleve range of pipes and fittings for its new build customer, Surrey based Croudace Homes, for over ten years.**

One of Bonnybond's key business objectives is to complete contracts to a high quality standard for its customers. Neil Chapman, Buyer, believes that SuperSleve is the best drainage system to help achieve this. Neil commented: "Bonnybond has been using SuperSleve for a long time now –

*it's a tried and tested system that we are comfortable with. Our guys on site tell me that they like SuperSleve because it is fast and easy to fit. They like the wide range of fittings available, making the system simple and adaptable for all situations.*

*"SuperSleve improves productivity because the rigid pipe beds firmly down into the trench bottom, making it faster to gain the correct line and level without the pipe sagging. We use a chain cutter for small diameters which is extremely fast and for the larger diameters we buy special purpose short lengths; reducing the need for cutting. This means we can get more pipes in the ground.*

*"Testing is a quick and easy process done at regular intervals. Once installed, we do not need to think about drainage again. More importantly, neither do Croudace home buyers."*

SuperSleve HouseDrain is a range of pipes and fittings designed and developed specifically for around the house drainage but equally suitable for commercial and industrial developments.

It is a drainage system that combines inherent strength, reliability, durability and dimensional accuracy to give confidence in service and assurance during installation.
