

Raising the standards

# Raising the standards

IMAG Limited is one of the UK's leading suppliers of self-binding gravels for applications such as landscaping projects, sports field construction and is an attractive alternative to traditional materials such as flags, paving, macadam or concrete.

Our range of footpath material, with its variety of colours, enhances any setting and is particularly sympathetic in rural areas or traditional-style properties, as well as modern developments in urban and sub-urban settings.

Established for nearly twenty years, IMAG Limited is leading the way in the UK hard landscaping industry. As a result of our experience in the field, we are able to offer a wide range of products suitable for all manner of projects.

## Raisby Golden Gravel™

Raisby Golden Gravel™ is a self-binding gravel; an attractive, easy to lay alternative to traditional materials such as flags, paving, ash, macadam or concrete. It enhances any setting, has a mellow colour, a good texture and is particularly sympathetic within rural settings and period or traditionally styled property, as well as modern developments in urban and suburban settings.

### Applications

Raisby Golden Gravel™ is an excellent surface for footpaths, drives and car parks. It provides attractive and tidy cover for areas that cannot be cultivated.

### Characteristics

Raisby Golden Gravel has natural setting properties and remains much firmer under foot than river gravel. The material is available in 10mm-dust for car parking areas, and 6mm-dust for footpaths and open spaces.

# Boulders & Cobblestones

Granitic glacial boulders provide hard-wearing decorative feature effects for such properties as business parks and leisure developments, road traffic schemes and sea defence systems. The smooth, rounded stone surfaces make them particularly suitable for use in play areas.

If required, boulders can be supplied weighing up to 30 tonnes for an individual boulder.

To complement the boulders, IMAG also supplies a comprehensive range of rounded, natural gravels and cobblestones in a variety of sizes, in particular the beach replenishment all-in grade of 50-200mm.

## Applications

Small cobblestone walkways are an inviting addition to most landscapes. Selected boulders can be used to create castle-like structures. Matching landscape boulders are an important complement to stone walls or a cobblestone pathway. A choice of selected landscape boulders are readily available. Some advance notice may be required for larger orders of a particular size.

## Welsh Slate

Natural slate is one of nature's most enduring gifts. With its unique combination of aesthetic and technical qualities, natural slate has long been a favourite amongst architects, designers, builders and landscapers.

### Applications

Slate benefits from a number of highly practical properties. It is exceptionally durable, unaffected by extreme temperatures and highly resistant to acids, alkalis and other chemicals. It retains its colour, even in UV light and is impermeable to water.

In addition, it is non-combustible and compatible with all other building materials. Slate is easily maintained, making it an economical choice for all building purposes and is readily available in a variety of sizes, colours and textures.

Monoliths are available, drilled or undrilled, in a variety of sizes. Landscaping material is available in several sizes and four colours: traditional blue-grey, plum-red, green and grey-black.

IMAG Ltd is one of the UK's leading suppliers of natural and reclaimed stone. Stones are sourced from both the UK and abroad and have been specified for projects in the hard landscaping industry, for sports applications, local councils and highways authorities.

#### **Delivery**

IMAG can arrange delivery of your product to a site anywhere in the UK. Call now to find out more or arrange delivery of your next order.
