Lb3 – three bathroom styles for living in real time

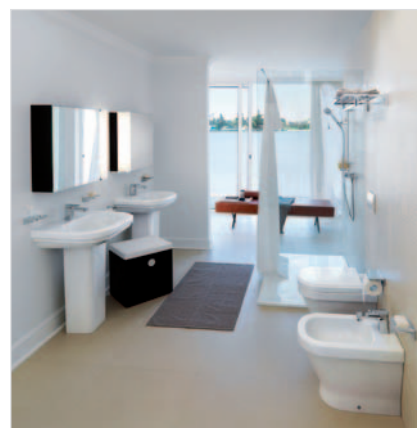

Home living is not a celluloid snapshot but a colourful presentation of the occupant's life, ideas and treasured objects. Laufen's concept for real style living is called Lb3. In designing it, the key proviso was that the styles freely interact with real life situations, unfettered by conventions. And taking it further: Users are at last given the green light to realise their own decorative impulses!

In its three style variations of the Lb3 bathroom ensemble, the Swiss bathroom specialist champions personal lifestyle and banishes style restrictions: Carte blanche is given to decorate and combine, and showcase personal treasures and exotic objects. After all, real life teaches us: The bathroom is

an intimate, intensely personal space. It is there to promote well-being and relaxation – and therefore rejects rigid bathroom concepts.

Preparatory to Lb3, the Milanese architects and designers, Ludovica+Roberto Palomba studied living in international metropolises. What they discovered: People quite naturally possess a penchant for the styles of the 19th, 20th and 21st centuries – yet at the same time they experience a deep-seated need to personalise these styles and adapt them to suit their personalities.

Ludovica+Roberto Palomba grouped their designs around three strong archetypes: washbasins in “modern”, “classic” and “design” variations. “modern” with its clear-cut contours is an unconventional tribute to the Modern and Bauhaus styles. The dual contours of “classic” are the epitome of timeless elegance – and not only reserved for living in modernised old buildings. On the other hand, the cube and soft curves are characteristic of the “design” line washbasins, leading up to the designer-oriented interior style of the metropolises around the globe. The extensive selection leaves options wide open from drop-in vanity washbasins to sculpted washbasins with pedestals. A special design feature of the Lb3 washbasins is the invisible outlet and overflow – a solution that is both stylish and hygienic.

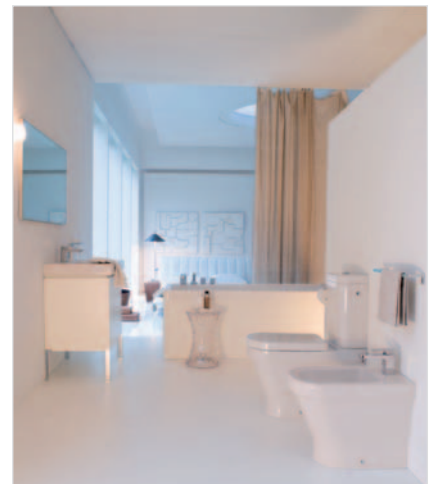

Be it floorstanding or wall-hung, with surface or flush-mounted cisterns: the Lb3 WC and bidet spectrum impresses with a wealth of options and practical details: A cover with soft-close mechanism, invisible overflow on the bidet and WC seat with anti-bacterial coating are optionally available, and furthermore, all fixtures are concealed.

A highlight of the Lb3 bathroom is the real wood veneer-clad bathtub in high quality sanitary acrylic. Generous tub dimensions of 180 x 80 x 46 centimetres and a 30 degree inclined backrest assure relaxed bathing. Additional comfort comes in the shape of a step with handle, soft gel pillow and dashboard integrated in the tub rim within easy reach. The matching

PRESS INFORMATION

shower tray is impressively flat and practically rimless. It, too, is made of skin and clean-friendly sanitary acrylic. At a height of just 1.5 centimetres it is ideal for flush solutions or barrier-free floor-level installation. Bathtubs and shower trays alike feature a concealed outlet. It is sunk in at floor level and covered – and is therefore imperceptible when sitting or standing.

The furniture is simple and elegant in appearance – Laufen has a penchant for exclusive veneers. Should bathroom walls be unsuitable for wall-hung furniture due to insufficient bearing capacity, or a floorstanding solution be preferred, matching chromed furniture legs are available. The furniture selection also includes a roller container that, with its pull-out drawers, serves both as a storage and mobile seating option.

The Lb3 mirror system is out of this world: The individual elements are based on a modular system – out of which the mirror cabinet of your dreams can be fashioned, complete with lighting.

The accessories and faucets of the bathroom collection were also specially designed for Lb3. An extensive range is featured: It extends from single to two-handle mixers, single and three-hole versions to faucets for showers and bathtubs. Lb3 faucets display a unique symbiosis of form and function. The inspirational creators being Jürg Heuberger, a Swiss architect and designer, and the SimilorGroup, Switzerland's leading faucets manufacturer. A timeless design paired with future-focused technology, for the Ecototal technology of the mixer system used here achieves exceptional water and energy efficiency. An extensive selection of practical bathroom accessories completes the bathroom collection: With its chromed hand towel holders, glass or metal shelves to crystal glasses and soap dispensers with matching holders, Lb3 turns everyone's dreams into reality. ▼
