

Installations

Centrifuges are used globally for the high performance separation and dewatering of suspensions in industries ranging from food production to waste water treatment.

The current range available offers models from 1 – 150m³/hr.

Hygienic designs are available for food and pharmaceutical production, and other specialist three phase models are used for the separation of oil from water and solids.

Custom built, complete turnkey project installations are available from M&SE to meet your particular site requirements.

- Decanter centrifuge capacities from 1 to 150m³/hr.
 - High torque designs
- Electrical, hydraulic or gearbox scroll drive systems
 - Fully automatic
- Low operator / maintenance requirement
 - High performance
- Food grade & CIP designs available

Dewatering of waste water treatment sludges.

DP84-362 Centrifuge, dewatering 100 m³/hr of mineral processing waste

Centrifuge model DP45-422 dewatering 25 m³/hr of waste water

Centrifuge model DP54-422 potato factory effluent processing 40 m³/hr
