We maintain, repair or replace all types of equipment

Preventative maintenance

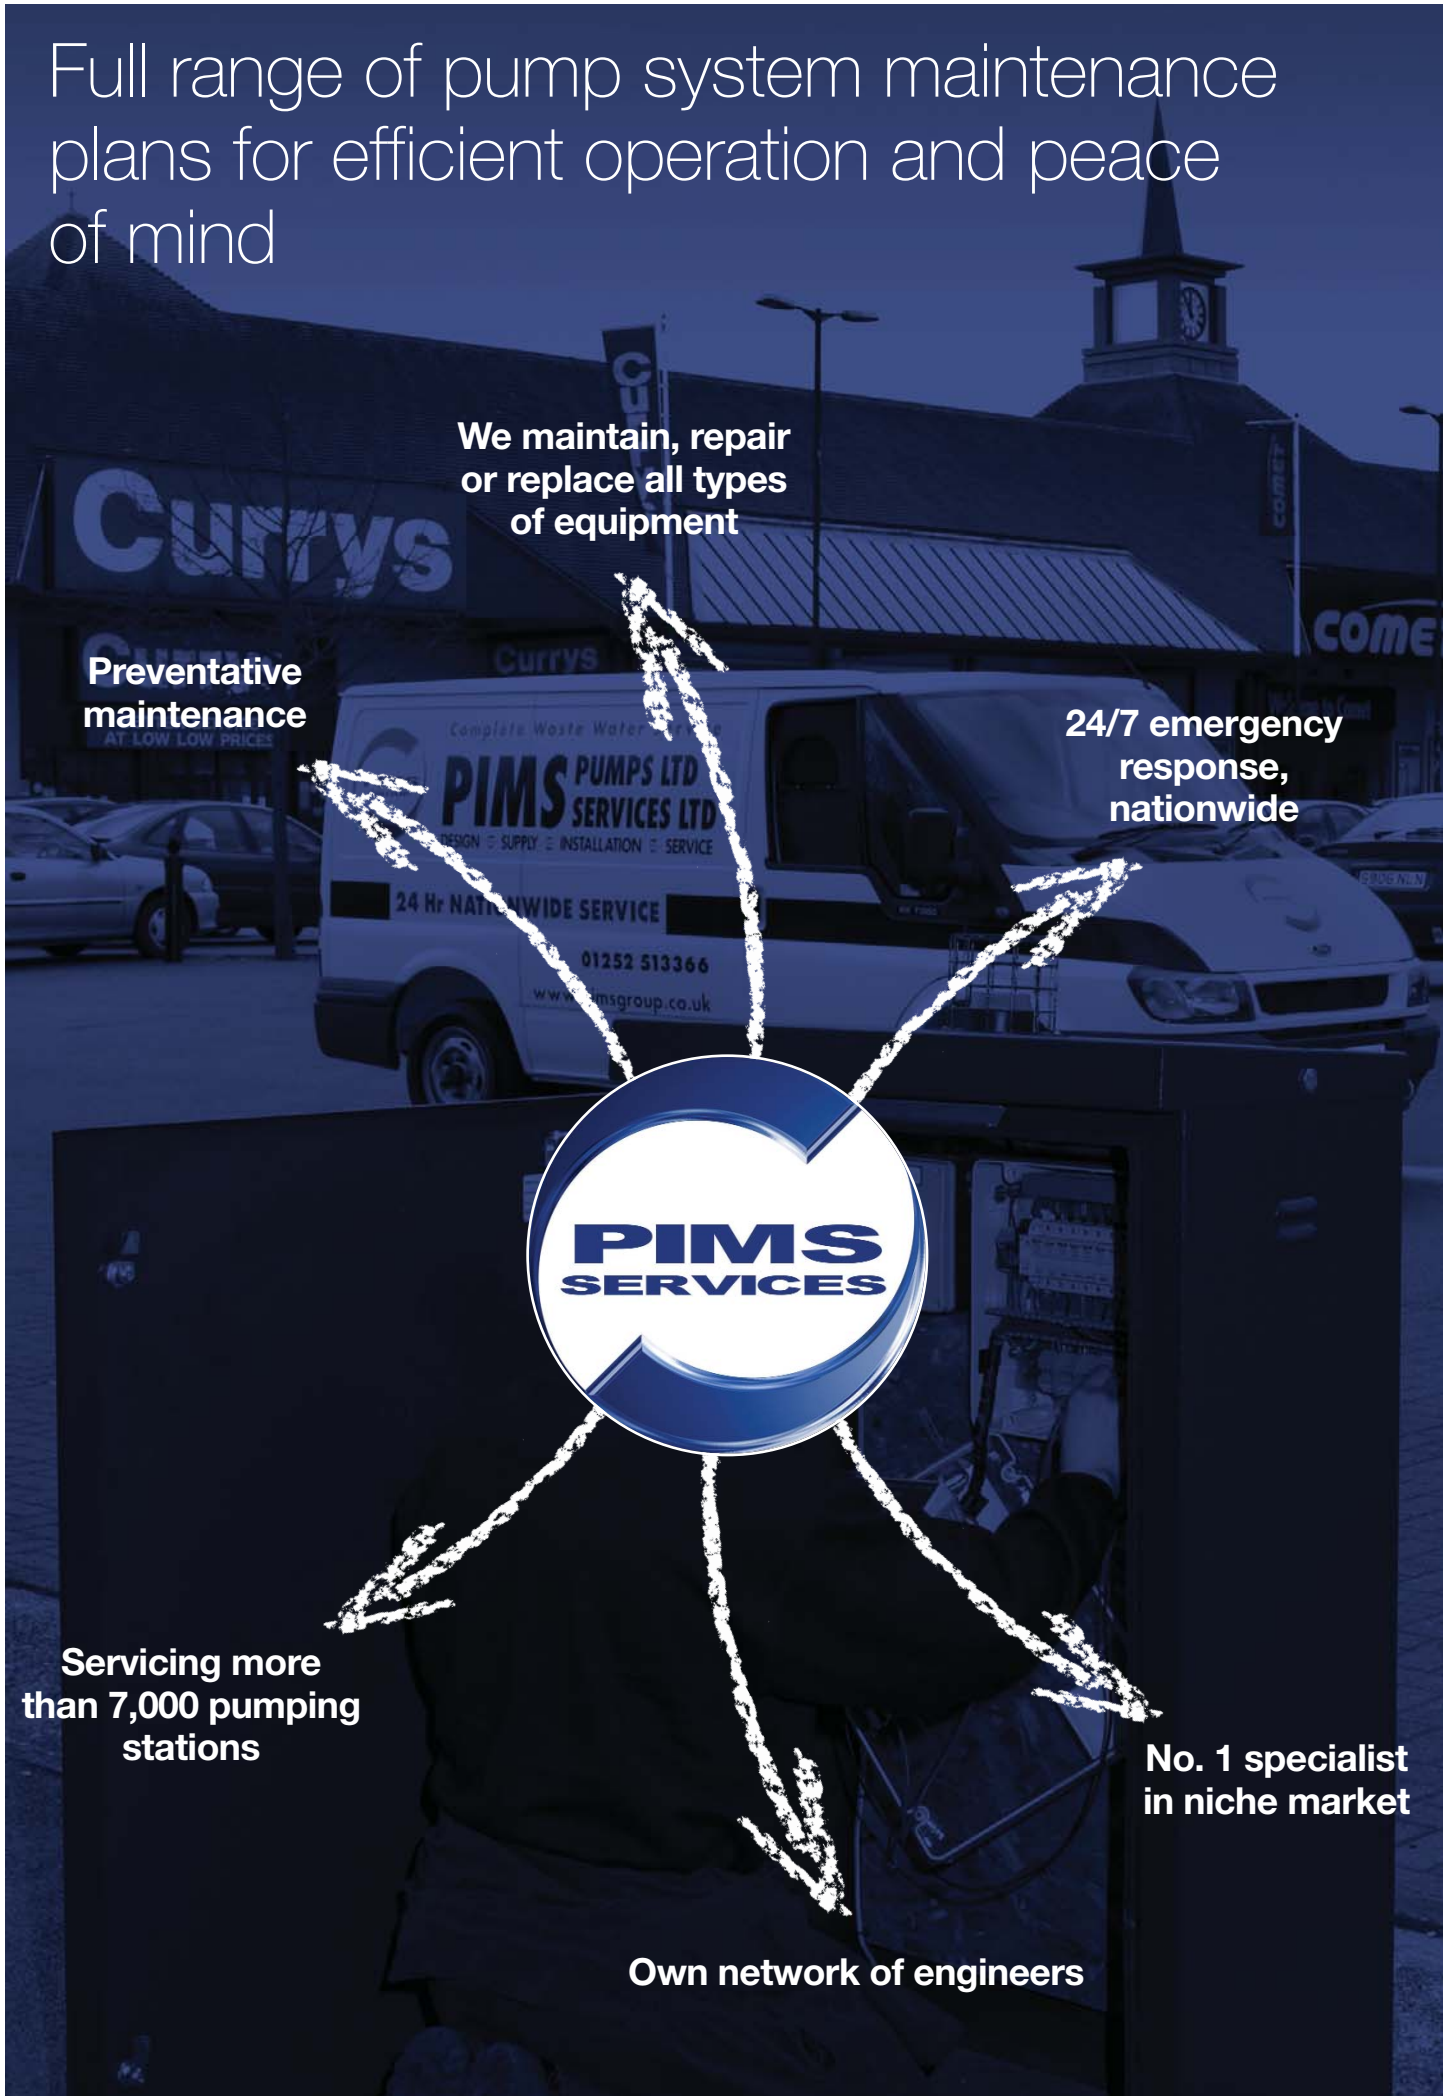

24/7 emergency response, nationwide

Servicing more than 7,000 pumping stations

No. 1 specialist in niche market

Own network of engineers

Maintenance and emergency call-out services

Sewage and storm water pumping systems

PIMS Group delivers a full range of ongoing maintenance products to ensure that pump systems operate efficiently. We provide term contracts for planned maintenance, together with 24/7 emergency response, and in-house rewinds, repairs and rebuilds for more than 7,000 pumping stations across the UK.

Preventative maintenance on your waste water and drainage systems helps minimise breakdowns and failures, by adjustment, repair or replacement of equipment before major failure occurs. An efficiently designed preventative maintenance programme will reduce overall costs, bringing best management practice to your organisation.

We professionally maintain, repair or replace all types of equipment for supermarkets, housing developers, local authorities, managing agents and private individuals. Regular servicing of pumping equipment extends its life and efficiency and we are on hand for that process. Our customised computer program controls the scheduling of routine servicing, while emergencies receive immediate attention.

Complete range of service contracts

ServiceCare

PIMS ServiceCare contracts consist of preventative maintenance visits at an agreed frequency to ensure efficient and reliable system operation. As part of all service visits, a detailed service checklist covers visual inspections, working tests, system adjustments and electrical safety checks to NICEIC standards. ServiceCare customers also benefit from a high priority emergency service 24/7, 365 days a year at significantly discounted labour rates.

PumpCare

PIMS PumpCare contracts are the ultimate in terms of all-inclusive fixed costs contracts. Our contracts can be up to five years in duration and include all routine and periodic maintenance requirements, attendance to all call-outs and repairs or replacement of equipment as necessary. The set-price contract gives customers the peace of mind

of known predictable maintenance costs for up to five years ahead. All contracts are delivered through a nationwide network of our own engineers. Our field service staff are fully trained in health and safety, confined space entry, and the technical aspects of all types of equipment.

TotalCare

The PIMS TotalCare Waste Water Service contract uniquely offers a customer the option of transferring the full management of waste water and drainage systems to the No. 1 specialist in this niche market. PIMS will completely manage the coordination and delivery of the service for maintenance and replacement of all your waste water assets. This total waste water contract option ensures on site coordinated management of planned and reactive servicing which produces significant operational and financial risk reduction for clients.

Preventative maintenance helps minimise breakdowns by repairing or replacing equipment before a major failure occurs

Sewage and storm water pumping systems
