

# Package pump stations

Sewage and storm water pumping systems

Package pumping solutions which meet the building regulations are designed for economy, reliability and low maintenance

**Nationwide coverage**

**Tailored solutions**

**24/7 customer support**

**Pre-assembled pipework for easy installation**

**Specialist pumps**

**Domestic, commercial and industrial solutions**

# Package pump stations

## Sewage and storm water pumping systems

PIMS Group offers the most extensive range of package pump stations on the market, to meet all your sewage and drainage requirements. Our solutions are fully compliant with Building Regulations and all other relevant guidelines, and combine high quality and competitive prices.

These installations are primarily used for residential, commercial or industrial developments where a quality system at a realistic price can be matched to a comprehensive maintenance service.

### Tailored solutions

Depending on the application, pump stations are designed with one or two submersible pumps – in a range of sizes providing tailored solutions for up to 300 residential dwellings or up to 2,500 people in a commercial or industrial environment. Pump stations

are also designed to handle storm water flows from 5-75 litres per second, depending on size.

Each station provides storage capacity, with pumps programmed for normal operation only while the water level is between preset limits for maximum economy.

### Specialist pumps

We use GRP housings for a robust and durable solution in all our package pump stations. This is complemented by pumps from leading specialist manufacturers, to ensure the best pump for every job. Other parts, including controls and pipework, are designed and built for maximum reliability and quality, making our systems particularly easy to install and easy to maintain.

There are five basic sizes of package pump stations, which can be increased in capacity by the addition of one or more 500mm segments to extend the depth of the chamber. Each system is designed with a

margin of redundancy to maximise storage capacity during any downtime of the pumps.

PIMS operates throughout the UK, providing a comprehensive design, installation, maintenance and refurbishment service for package pump stations, with qualified engineers on standby 24/7 in case of any emergency.

Robust and durable solutions, designed for maximum reliability and low maintenance

### PIMS solutions

- GRP housings ensure robust, durable and reliable stations
- Pumps from leading manufacturers – the best pump for every installation
- Pipework is pre-assembled for fast, easy installation
- Electrical controls with integrated alarm system

### Package benefits

- Building Regulations compliance
- High quality, competitive prices
- Fast, efficient, UK-wide deliveries
- Customer support 24/7
- Maintenance contracts

## Sewage and storm water pumping systems

- Design, installation and commissioning
- Package pump stations
- Maintenance and emergency call-out services
