

## SESYS CAMSYS

You can't be everywhere at once - but with the CamSys Observation Camera you can keep your eyes on the places that are important to you, *even when you're not there!*

Want a regular update from a remote location? The CamSys Observation Camera can be programmed to take images automatically at designated time intervals and email them as an attachment to your email address.

Providing security and observation for remote site monitoring, CamSys removes the necessity of the expensive overhead of unnecessary site visits by engineers caused by false alarms. The CamSys system can be used to monitor any aspect of life, from your home or office to warehouses, garages, or more remote areas, such as your boat or summerhouse. The unit is low power, so solar or wind energy can also be utilised for power. The camera takes seconds, from the shot being taken to arriving in the recipient's email inbox

### FEATURES

- Image size: VGA (resolution 640x480 pixels);
  - JPEG encoding format;
  - GSM/GPRS communications;
